Wiring Diagram

- Two 0/1-10V signal input, one is for dimming control, the other for color temperature control.
- The 0/1-10V input is also operable via commercially available simple rotary wall switchs designed for 0/1-10V dimming equipment or from decicated system central dimming controllers.
- Compliant with O-1OV, 1-1OV, PWM(1KHz 1OV), RX(Adjustable Resistors O-39OK), RX(4 in 1).
- We recommend the number of LED drivers connected to 0/1-10V dimmer does not exceed 50 pieces, The maximum length of the wires from dimmer to LED driver should be no more than 50 meters.

Installation note

- 1. This product must be installed and adjusted by a qualified professional.
- 2. This product is non-waterproof. When installed outdoors, please ensure it is mounted in a water proof enclosure.
- 3. LED driver should keep a certain distance from the heating stuff(such as the luminaries radiator).
- The installation interval between the product and the product is recommended to be 15cm, so as not to affect the service life due to poor heat dissipation. 4. Before you power on the product, please make sure all the wiring is correct in case of incorrect connection that may cause a short circuit and damage the components, or trigger a accident.
- 5. If a fault occurs, please do not attempt to fix the product by yourself. If you have any questions, please contact us in time.
