## Match Remote Control (two match ways)

The touch panel controller can also match with the RF remote (optional).
End user can choose the suitable match/delete ways. Two options are offered for selection:

## Use On/Off key

Match:
Turn on light, turn off, immediately press the On/Off key of the panel for 5s, then press on/off key (single zone remote)
or zone key (multiple zone remote) of the RF remote within 5 s .
The LED indicator fast flash 3 times means match is successful.

## Delete:

Turn on light, turn off, immediately press the On/Off key of the panel for 10s, delete all matched RF remote.
The LED indicator fast flash 6 times means all matched remotes were deleted.

## Use Power Restart

Match:
Switch off the power, then switch on power, repeat again, immediately short press on/off key (single zone remote) or zone key (multiple zone remote) 3 times on the remote. The light blinks 3 times means match is successful.

## Delete:

Switch off the power, then switch on power, repeat again, immediately short press on/off key (single zone remote) or zone key (multiple zone remote) 5 times on the remote. The light blinks 5 times means all matched remotes were deleted.

seeke seeme seeese seefee — 4 scenes, short press recall scene, long press 5 s to save the current color into scene $1 / 2 / 3 / 4$.

Note: After touch power key to turn off light, long press power key for 5 seconds will turn on or turn off tone(T1 , T2 without key tone).

## Scene locking:

- Scene keys can be set to locked state, cancel long press for 5 seconds to save the scene function (default scene is not locked).
- Short press the panel on/off key, turn on the light first, then turn off the light, immediately long press the panel on/off key for 5 seconds, then immediately long press any one scene key for 5 seconds to set all scene keys to locked state.
- Short press the panel on/off key, turn on the light first, then turn off the light, immediately long press the panel on/off key for 5 seconds, then immediately long press any one scene key for 10 seconds to restore all scene keys to unlocked state.
- T1 Single color panel

DIP switch select four PWM frequency: $1 \mathrm{KHz}, 2 \mathrm{KHz}, 8 \mathrm{KHz}$ or 16 KHz .
Higher PWM frequency, will cause lower output current, higher power noise, but more suitable for camera(No flickers for video).

- T2 Dual color panel

DIP switch 1 select two PWM frequency: 2 KHz or 8 KHz .
Higher PWM frequency, will cause lower output current, higher power noise, but more suitable for camera(No flickers for video). DIP switch 2 select color temperature output mode: $\mathrm{NW}=50 \% \mathrm{WW}+50 \% \mathrm{CW}$ or $\mathrm{NW}=100 \% \mathrm{WW}+100 \% \mathrm{CW}$
